

BMW Global Sales Dashboard – Project Report

1. Introduction

The BMW Global Sales Dashboard is a business intelligence project developed using Microsoft Power BI. The objective of the dashboard is to analyze BMW's global sales performance, understand customer behavior, and identify regional sales trends using interactive data visualizations.

2. Objectives

- Analyze BMW global sales performance.
- Identify revenue contribution by different regions.
- Study fuel type distribution and customer preferences.
- Understand vehicle pricing and engine trends.
- Provide insights for product and vehicle strategy.

3. Tools and Technologies

- Microsoft Power BI – Dashboard and visualization creation.
- Microsoft Excel – Data source and preprocessing.
- DAX (Data Analysis Expressions) – Calculations and KPIs.
- Data Modeling – Relationships between datasets.

4. Dataset Description

The dataset contains BMW vehicle sales information including region, revenue, fuel type, vehicle model, vehicle color, engine size, transmission type, units sold, price, and year. The dataset helps analyze sales performance and customer preferences across global markets.

5. Dashboard Pages

Overview – Displays overall sales performance, revenue trends, and top models.

Product & Vehicle Strategy – Shows pricing strategy, fuel type demand, and vehicle characteristics.

Regional & Customer Segmentation – Analyzes sales across regions and customer segments.

6. Key Insights

- Asia contributes the highest revenue among all regions.
- BMW 7 Series is the top-performing model.
- Hybrid and petrol vehicles generate significant sales.
- Average selling price is around 75K.
- Global revenue has steadily increased over the years.

7. Conclusion

The BMW Global Sales Dashboard provides a comprehensive view of global sales performance. Using interactive Power BI visualizations, businesses can analyze trends, identify market opportunities, and make data-driven decisions to improve sales strategies and product offerings.
